

We at LoneStar USA Safety & Training are pleased to be the safety consultants for Hy-Bon Engineering, Inc. Together we have established one of the finest safety records of any company in the Permian Basin. With the complete cooperation and dedication of both management and the employees Hy-Bon Engineering has become a Safety Leader.

We help keep this record intact with monthly safety meetings on a wide range of safety issues, including Hazard Communication, Personal Protective Equipment, Confined Spaces, Electrical Safety, Lockout-Tagout, Back & Lifting Safety, Hazardous Waste Response, Heat Stress, Hand & Tool Safety, Forklift Certification, Driving Safety and many others.

In addition field employees are given classes in Hydrogen Sulfide Certification and First Aid/CPR.

Hy-Bon Engineering's commitment is such that all newly hired employees come here for a full day of safety training before being allowed to work.

Another indicator of Hy-Bon's commitment is regular inspections by LoneStar USA Safety in the shop areas. We look for compliance issues including employee working habits, signage, tools, PPE usage, and environmental safety.

In every aspect we are pleased to have had a working relationship for many years. It is a pleasure for our personnel to serve such a company, especially one with such supportive management.

Thank you from all of us at LoneStar USA Safety & Training for the many years of a satisfying partnership in safety.
